LCP

LARGEST CONTENTFUL PAINT

The render time of the largest image or text block visible within the viewport

https://web.dev/explore/learn-core-web-vitals

FID

FIRST INPUT LAY

The time from when a use on or command and the page executes it

https://web.dev/explore/learn-core-web-vitals

INP

INTERACTION TO NEXT PAINT

The longest duration of latency of all click, tap, and keyboard interactions with a page throughout its lifespan, excluding outliers

https://web.dev/articles/inp#inp-vs-fid

CLS

CUMULATIVE LAYOUT SHIFT

The *largest burst* of *layout* shift scores for every unexpected layout shift that occurs during the entire lifespan of a page

https://web.dev/explore/learn-core-web-vitals

OTHER VITALS

PAGE LOAD

* requestStart may occur before connectionEnd
e.g. with TCP Fast Open
** responseStart is equal to firstInterimResponseStart
if non-zero or finalResponseHeadersStart

https://web.dev/articles/ttfb

TTFB

TIME TO FIRST BYTE

The time between the request for a resource and when the first byte of a response begins to arrive.

https://web.dev/articles/ttfb

JavaScript

A language-specific implementation of OpenTelemetry in JavaScript (for Node.js & the browser).

This is the OpenTelemetry JavaScript documentation. OpenTelemetry is an observability framework – an API, SDK, and tools that are designed to aid in the generation and collection of application telemetry data such as metrics, logs, and traces. This documentation is designed to help you understand how to get started using OpenTelemetry JavaScript.

Status and Releases

The current status of the major functional components for OpenTelemetry JavaScript is as follows:

Traces	Metrics	Logs
Stable	Stable	Development

For releases, including the latest release, see Releases.

Warning

Client instrumentation for the browser is **experimental** and mostly **unspecified**. If you are interested in helping out, get in touch with the Client Instrumentation SIG.

web-vitals TS

4.2.3 • Public • Published 2 months ago

Readme | Code Beta | 0 Dependencies | 18,887 Dependents | 76 Versions

web-vitals

- Overview
- Install and load the library
  - From npm
  - From a CDN
- Usage
  - Basic usage
  - Report the value on every change
  - Report only the delta of changes
  - Send the results to an analytics endpoint
  - Send the results to Google Analytics
  - Send the results to Google Tag Manager
  - Send attribution data
  - Batch multiple reports together

Install

```
npm i web-vitals
```

Repository
